NEW Innovations in Engineered Site Solutions Seminar

Innovations in Site Solutions

This seminar will provide attendees information on the advancements of grade separation technologies.

Retaining Wall Design Software – Demonstration of the Basalite Design program that will allow the designer to design MSE wall systems with multiple design methods (i.e. NCMA and FHWA) and perform global stability and compound stability.

Selecting the Right Geo-Synthetic – Tencate (Mirafi) will provide the attendees the Do's and Don'ts in the selection and design for geogrids and fabrics. Also included is the TenCate Geodetect fiber cable monitoring for MSE Structures and SRW connection test data reports that pertain to face of wall connection.

Articulated Concrete Block (ACB) Design Advancements – Review the NCMA's Articulated Concrete Design manual and design spreadsheets that have been developed for the design of these systems.

The seminar includes a copy of the Basalite design software (one per firm) and lunch!

Guest Speakers

Paul Frankenberger, P.E. - Tencate
Over 20 years experience in the MSE Retaining wall industry, BS and MS in Civil Engineering from Georgia Tech University and a Registered Engineer in California.

Joe Kerrigan, P.E. - Basalite
Graduate from Colorado State University with a BS in Civil Engineering, and a Registered Engineer in Colorado. He has worked in the grade separation, soil improvement and foundation industry for over 10 years, and has been involved in all components from design to installation of mechanically stabilized earth structures. During this time he has worked on variety of design build and plan build design projects all over the United States.
