

NEW – PAY IN 12 MONTHLY INSTALMENTS

We are pleased to announce the following unique and highly informative seminar on fall protection:

"Competent Trainer in Fall Protection"

5-Day, Two-in-One Seminar will be held on July 12-16, 2010 in Toronto.

This unique seminar is recommended for health and safety personnel, trainers, supervisors, JHSC members, safety technicians and engineers and others with some experience in Fall Protection wishing to take their knowledge to the next level!!

1. Our Graduates receive two certificates: the **Competent Trainer in Fall Protection and the Qualified Inspector of Fall Protection Equipment**.
2. Your **Trainer's Certificate** is backed by the largest standard writing organization in Canada: The Canadian Standards Association (CSA).
3. Every participant receives **3 Manuals, 2 Books, several Videos (DVDs) and 10 CSA Standards**. All strictly about Fall Protection!!!!
4. Included in our Program are **three new and complex CSA Standards** on horizontal lifelines, on design of fall arrest systems, and on energy absorbers. The first two standards were written for engineers - we explain them in non-engineering language. Note that all three call for major changes in the way we design Fall Arrest Systems. Also included is the **new CSA Standard** on full body harnesses.
5. New or amended Fall Protection Regulations which make **training in Fall Protection mandatory** are now in place in most Canadian Provinces.
6. The Canadian Federal Government passed **Bill C45** in 2003, which criminalized safety infractions. **Our Certificates may serve as proof of your due diligence**. You will have improved your fall safety and reduced your personal, as well as your employer's, liability.
7. Most Canadian Provinces now allow **contingency-style injury litigation**, similar to the one that got totally out of hand in USA.
8. Fall protection is the most complex field of personal protective equipment. This seminar was developed by Andrew C. Sulowski, P.Eng. who has been working continuously in Fall Protection since 1977. Two of the three books on Fall Protection in the English language carry his name. You can review Andrew's credentials at www.fallpro.com.
9. The seminar will be conducted by four speakers who are the experts in heights safety.

Gravity is with us to stay, so a **falling accident WILL happen sooner or later**. Our graduates will be able to minimize its consequences. Be proactive, improve safety, prove your due diligence and avoid injury and litigation.

More information, including the 5-day Program, Main Manual Contents, Andrew's Bionote, Additional Reasons for Attending and the Registration Form are available on our website at www.fallpro.com. We accept your fee in three installments.
