

Xstrata Technology develops, markets and supports technologies for the global mineral processing and metals smelting and refining industries. Our products and services are highly regarded and demand is growing rapidly.

Fundamental to our success is the way we work. We value people with industry experience and we let them get on with the job. We combine process and engineering specialists to create comprehensive solutions. We expect to keep long term relationships with clients long after commissioning. We develop technologies and the way they are used to make industry more efficient.

We want to make a difference.

Engineering at Xstrata Technology

Engineering is not just designing to a set of standard specifications and a deadline. It's about truly understanding the client's needs and innovating to solve their problems. It's about seeing the whole process, from concept through commissioning and into operation. You can only improve the design for the next project if you are involved in the whole life-cycle of the project.

Engineering at Xstrata Technology is about finding better solutions, not selling billable hours. We pride ourselves not just on providing great technologies but on building plants that work; then making them better.

Use your skills to make a difference. Be a part of our future.

Project Engineer/Manager, One-Year Full-Time Contract Brisbane, Australia

Responsible for ensuring projects meet all specifications and customer satisfaction requirements, you will provide outstanding project engineering and management support to deliver existing projects which are in the execute phase and new projects in the development phase. Coordinating assigned projects from initial concept selection through to commissioning and handover, you will be called upon to manage project delivery to meet HSE, quality, cost, schedule and performance targets.

You have at least five years of successful project management experience working on multi-disciplined projects across all project phases, gained in a construction/heavy engineering environment. Adept at driving project delivery, you are a proven team player and demonstrate excellent verbal and written communication skills. Your background includes success in the analysis and management of project risk. Strong computer skills and proficiency with Microsoft Office products are required; familiarity with MS Project and/or Primavera P3 would be an asset. Tertiary qualifications in Engineering are preferred, while post graduate qualifications in Project Management would be highly desirable. You must be flexible for occasional travel to project sites.
