

BUILDING SCIENCE ENGINEER

Victoria, B.C
Consulting Engineering Firm
Excellent Salary + relocation assistance offered

A well recognised employee-owned organization is now seeking a Building Science Engineer to join their office in Victoria, B.C. The client is offering a very unique opportunity for this individual to be part of a growing environment and have the prospect to tailor their career as they wish (technical or project management). The client offers services which are focused on assisting with architectural design and enhanced field review for new construction, while for existing buildings services include forensic diagnosis, fully coordinated environmental separation design solutions, and construction contract administration.

Reporting into the Branch Manager, you will act as the technical lead and will be responsible for coordinating and managing your project team for both the private and public sector clients. You will be managing EITs and/or technologists and be coordinating professionals for the remediation of existing buildings as a professional sub-consultant for the design and implementation of new construction. You will have proven technical familiarity in the areas of: rainscreen and mass wall construction for all air barrier, cladding, and wall assemblies, hygrothermal theory, below grade waterproofing and roofing systems, opinion of probable costs (OPC), design review of concept drawings, working drawings and shop drawings.

For a successful application you must have experience as a Building Science Engineer. Must be a registered professional engineer (P.Eng) or have 4 or more years as an EIT with full-time experience in Building Science. Must be familiar with regulatory requirements and approvals (e.g. BCBC, VBBL-an asset, HPO) and have excellent communication skills. Also, you must be open to some traveling as there are some construction site projects which will require your attention.

SENIOR CIVIL ENGINEER

Nanaimo, B.C
Consulting Engineering Firm
Excellent Salary + relocation assistance offered

A motivated professional needed to join a reputable consulting firm as a Senior Civil Engineer/ Senior Project Manager. The client is presenting a clear route of advancement into top level management with clear motivation and guidance from the President himself. The firm has been serving the industry for the last 30 years in a number of areas such as infrastructure, environmental and building sciences in both private and public sectors.

As a Senior Project Manager you will be able to carve your own career path and have your own career progressing time lines. For a successful application, you must have had experience in managing large design construction projects such as water supplies and sanitary sewer systems. You must have the ability to motivate a project team consisting of approximately 5-10 professionals. In order to advance into a Management level position, you must have proven experience in business development and client retention with project accounting experience. An engineering related degree with the professional registration (P.Eng) is a must.

This firm is committed to providing a diverse and positive work place, with great emphasis on their employees' achievements and progression. Providing excellent benefits, a competitive salary with industry related training and the unique opportunity for employee share ownership.
